

## Main

Welcome to Lindorm CMS!

[Documentation for Lindorm 0.1 Hatchling](#)

[Documentation for Lindorm 0.2 Hatchling](#)

The idea for Lindorm CMS grew out of frustration with existing CMS solutions, I wanted a simple to install, simple to use CMS that would run on [OpenBD](#), but after looking and not finding anything that didn't require coaxing to work (If at all), I decided to do something about it rather than complain.

My hope is that the Lindorm CMS will become the go-to CMS for developers and users running [OpenBD](#).

There are currently no plans to test Lindorm on any platform other than [OpenBD](#) engine.

My name is Marcus Fernstrom, I'm a web developer who happen to love working with [OpenBD](#). Lindorm is a one-man project, so I apologize for the hastily put together documentation and code-quality of this first release.
